

CUSTOMER STORY

Family business Modiform, founded in 1980, has grown into a global producer of thermoform products for agriculture and horticulture, such as transport trays, growing systems and thermoformed pots. The production of these high quality products is obtained in a sustainable way by upstream and downstream recycling of raw materials. Modiform has production locations in Leusden, Scherpenzeel, Roosendaal and in Wormhout (France).

“The collaboration with objective is very pleasant, ‘one of a kind’. The combination of Objective’s technical solution and the experiences of Modiform has led to new insights and developments that we now see again in the new standard version of Objective.”

Jochem Oomens,
Supply Chain Manager

CHALLENGE

- Gate-to-gate implementation: receiving, production and shipping
- Tracking the actual consumption of raw materials
- Real-time monitoring of progress, quality and consumption per production order
- Reducing logistic transactions
- Real-time insight into stock
- Reduce paper flows and manual operations
- System of and by Modiform people in the operation

SOLUTION

- Implementation of Objective WMS in Roosendaal, Leusden and Scherpenzeel
- Integration with SAP as ERP
- Implementation of Mes Roosendaal, rollout of MES to Leusden and Scherpenzeel in 2021
- Integration with the process automation in Roosendaal
- Rollout to Wormhout in 2021

RESULTS

- 100% traceability from gate-to-gate
- Managing the transactions
- Registration of actual consumption
- Direct insight into stocks and locations
- Positive impact on internal and external customers
- Significant reduction in the number of errors
- Full insight into production progress and quality
- Real-time reliable information
